

Elenco Protease GF-700

PROTEASE ENZYME MIX

Why use Elenco Protease GF-700?

Around 20% of protein is thought to avoid digestion and be excreted as waste by the bird. The endogenous protease cannot digest some types of protein called anti-nutritional factors (antigens, trypsin inhibitors, etc) contained in soybeans and other leguminous materials, commonly used like ingredients in animal feed industry. This has an impact of formulation costs, as well, as serious ramifications for the health and growth of the bird, potentially leading to further increases in production costs.

Elenco Protease GF-700 contains a mix of different proteases (acid, neutral and alkaline) obtained from *Bacillus subtilis* (high-speed gene synthesis technology) and are able to digest this portion of dietary protein

Features and Benefits of Elenco Protease GF-700

- Increases protein digestibility through hydrolysis of storage and structural proteins
- Reduces anti-nutritional factors in raw material
- Supplements endogenous digestive enzymes
- Decreases diarrhea rate and improve survival rates
- Shows better performance in broiler growth
- Improve Average Daily Gain (ADG), Feed Conversion Ratio (FCR) and Egg quality and production
- Protects the environment by decreasing pollution from nitrogen

Composition

Acid protease 5,000 U
Neutral protease 15,000 U
Alkaline protease 8,000 U

Package

25 Kg Bag

Dosage

200 gr/MT of feed

Species

Broiler, layers and breeders

+351 920 359 893

Avenida da Liberdade 110,
1269-046, Lisbon, Portugal
