

Effective for several types of mycotoxins
Potential alternative for antibiotic growth promoters (AGP)
Immune response capacity enhancer

Why use Elenco Tox plus+?

Mycotoxins are harmful substances produced by fungi and they are present in various types of feed. Even at low concentrations, these toxins impact the gut health, immune system and performance of animals. Elenco Myconill plus+, apart from being a powerful mycotoxin binder, contains *Bacillus subtilis*, a spore-forming bacteria with important benefits for monogastric and ruminants including immune-modulation, enhanced nutrient digestibility, along with improvements in gut health, immunity, and growth performance.

Benefits of Elenco Tox plus+

- Contains *Bacillus subtilis* like a powerful probiotic for an efficient gut modulation. Contains Yeast cell wall with two functional polysaccharides (MOS and B-Glucans) that adsorb the macromolecular toxins such as aflatoxin, ochratoxin and zearalenone, which forms a stable polysaccharide-toxin complex, and Bentonites adsorbing Aflatoxins too. Activates macrophages through lectin and induces cellular and humoral immune responses in the body, thus enhancing non-specific immunity. Promotes the growth of beneficial bacteria and suppresses harmful microbes like Salmonella and Clostridium which improve digestion, feed efficiency and weight gain.

Composition

Bacillus subtilis 1 x 10⁹ CFU
Mannan Oligosaccharides (MOS)
Beta-glucan (1,3 - 1,6)
Calcium propionate
Bentonites

Package

25 Kg Bag

Dosage

Poultry:

250 - 500 gr/MT of feed
1 - 1,5 Kg/MT of feed (High challenge)

Dairy Cows: 10 gr/head/day

Calves: 5 gr/head/day

Small ruminants: 5 gr/head/day
